AES-IntelliNet Long Range Alarm Radio System Manufacturer Opens First Office in Asia

Bangkok office reflects commitment to serving the growing needs of the region

Peabody, MA - 15 March 2007. AES Corporation is pleased to announce that on the 1st of March 2007 a new office was formally opened in Asia. This office is located in Bangkok, Thailand and will be used to provide service and support to AES-*IntelliNet* and other AES solutions in the Asia-Pacific region. AES currently serves customers throughout Asia including customers in China, Vietnam, Singapore, Indonesia, India, Sri Lanka, Nepal and Australia. AES-*IntelliNet* is expanding its service and support capabilities due to the growing demand for central monitoring of security and fire alarms in the Asia Pacific region.

This increasing need for centralized alarm monitoring has amplified the popularity of the AES-*IntelliNet* MultiNet product. This self healing, long range wireless mesh radio communication network, works in conjunction with the Internet and provides Central Monitoring Services the ability to monitor locations all around the city, country, region and world without recurring monthly communications costs or infrastructure fees typically associated with remote monitoring. This allows AES customers the ability to provide a more reliable, faster means of communicating alarm signals to central monitoring stations without relying on telephone lines or cellular services that are vulnerable to line cuts, weather conditions, and recurring monthly costs.

According to Mark Brandstein, Chief Operating Officer of AES Corporation, "Asia represents a very significant and growing portion of our business opportunity and customer base. By opening this office we are emphasizing our enhanced and ongoing commitment to our customer base in the Asia Pacific region".

About AES Corporation: Established in 1974, AES Corp. is the industry leader delivering high quality wireless mesh networks to multiple industries, including the fire alarm and burglary monitoring market. Wireless mesh networking is an innovative technology for applications that need to communicate data over a large geographic area with a high level of reliability at a low cost of ownership. AES-IntelliNet technology offers easy installation and management at a performance and price level far superior to traditional communications methods, both wired and wireless. AES-IntelliNet network users in the Fire & Burglary Alarm Monitoring industry have gained significant revenue, communications and cost advantages while

meeting the high standards of reliability required. AES-IntelliNet systems are used in hundreds of thousands of locations in over 50 countries worldwide.
