AES-IntelliNet Introduces AES-7094 IntelliPro at ISC West

Peabody, MA March 2, 2010 - AES-IntelliNet will announce the release of its new AES-7094 IntelliPro full data module at ISC West in Las Vegas. The AES-7094 IntelliPro allows dealers the ability to remotely program popular burglar alarm panels through AES-IntelliNet mesh radio networks. The AES-7094 IntelliPro transmits full CID and pulse formats from the alarm panels through the AES-IntelliNet radio network to the central station for processing.

According to Tom Kenty, General Manager of AES's IntelliNet division, "With the AES-7094 IntelliPro we can now provide remote burglar alarm panel programming without the monthly fees associated with phone lines or GSM. Our dealers can now get full data and reconfigure settings remotely, with or without a phone line. We are very excited about this new product and the capabilities it provides. This revolutionary product is further evidence of AES-IntelliNet's determination, innovation and commitment to the needs of its customers."

The AES-IntelliNet's alarm system is a self healing, long range wireless mesh radio communication network and works in conjunction with the Internet to provide customers the ability to monitor alarms in multiple regions from one location, without recurring monthly communications costs or infrastructure fees typically associated with remote monitoring. The AES-IntelliNet mesh network also offers a more reliable, faster means of communicating alarm signals to central monitoring stations without relying on telephone lines or cellular services that are vulnerable to line cuts, weather conditions, radio jamming, and recurring monthly costs.

For more information visit booth # 9034 at ISC West in Las Vegas. Be sure to go to AES-IntelliNet website (www.aes-intellinet.com) for your free pass to ISC West or [click here](#) to download now.

About AES Corporation: Established in 1974, AES Corporation is the industry leader delivering high quality wireless mesh networks to multiple industries, including the fire alarm and burglary monitoring market. Wireless mesh networking is an innovative technology for applications that need to communicate data over a large geographic area with a high level of reliability at a low cost of ownership. AES-IntelliNet technology offers easy installation and management at a performance and price level far superior to traditional communications methods, both wired and wireless. AES-IntelliNet network users in the Fire & Burglary Alarm Monitoring industry have gained significant revenue, communications and cost advantages while meeting the high standards of reliability required. AES-IntelliNet systems are used in hundreds of thousands of locations in over 160 countries worldwide.
